Get peace of mind through frequent security testing.

Security researchers, hackers and computer criminals constantly identify new security flaws, known as vulnerabilities, in applications and operating systems. Attackers often develop automated tools to exploit new vulnerabilities within days, sometimes hours, of a vulnerability being disclosed.

Exploiting vulnerabilities can give attackers access to data that is sensitive to both your organization and your customers. To effectively protect your Internet-connected systems against new threats, you need to continually check your network and systems for new security vulnerabilities.

OUR SERVICE

Guard Street's external vulnerability scanning is:

ACCURATE AND COMPLETE

Our testing engine is updated daily and checks for tens of thousands of security vulnerabilities while inspecting your firewalls, routers, and web, email and application servers.

EASY TO CONFIGURE

Enrolling and set up is quick and easy! You can configure and review your test schedule and results any time you want from a web browser on any computer, mobile device or smartphone.

EASY TO MANAGE

You can plan and manage your security tests to meet your needs. Our web portal allows you to reschedule testing, monitor progress in real time, or even cancel the test while it is running.

EASY TO UNDERSTAND

Our reports include details on the hosts tested, each host's security status, and summarized results risk-ranked by priority. A detailed technical view shows specific vulnerabilities identified, recommended corrective actions and additional resources.

AFFORDABLE

Pricing depends upon the number of devices tested and the frequency of the testing. A small organization can have monthly tests performed for significantly less than the cost of a single penetration test, and at a fraction of the cost of dealing with a security breach. For large organizations, frequent testing can cost as little as pennies per device.

HIGHLIGHTS

- Non-disruptive
- Platform independent
- Web-based and accessible from anywhere
- Nothing to download or install
- Requires only network addresses
- Real-time control over scans

- Performs host and service discovery
- Performs service and operating system fingerprinting
- Risk-ranked results and corrective recommendations
- Payment Card Industry Data Security Standard (PCI DSS) approved

ABOUT GUARD STREET PARTNERS

Guard Street is dedicated to assisting our clients with information security risk management, quantifying the cybersecurity need, risk mitigation, monitoring your digital brand, fraud management and vulnerability detection and prevention.

Our services minimalize unwanted exposure and protect against external threats by detecting data loss, securing your online brand and reducing your attack surface. Organizations can suffer regulatory fines, loss of intellectual property and reputational damage when digital risk is left unmanaged.

Our experts specialize in:

- Computer Security Assessments
- Brand Monitoring
- Compliance Audits
- Penetration Tests
- Computer Forensic Investigations
- Security Awareness Training

TESTING WITH WEB-BASED MANAGEMENT AND LIVE SUPPORT

Whether you are a large corporation with multiple network blocks or a small company with a single IP address, you will find our service easy and effective.

External vulnerability scans are performed remotely, originating from our scanning servers. Our service only requires your network addresses; no need to download, install or configure anything on your systems.

The scans examine your external network over the Internet to look for security holes or misconfigurations in your:

- Application servers
- Database servers
- DNS servers
- Firewalls and routers
- Mail servers

- Operating systems
- Point of sale (POS) software
- Remote access applications
- Web applications Web servers
- Wireless access points

You and your administrative team log into our online portal to securely view your vulnerability results and corrective recommendations. From there, you can also run trend analyses, download reports and manage your schedule of upcoming vulnerability scans.

While we provide details suitable for highly technical staff, you don't need to be an information security expert to use our service. Before you start scanning, or after your scan has finished, you can call us to speak with a real-live person.

In addition to providing you the guidance you need, our capable support team will:

• Help you interpret your scan results and recommendations
• Analyze your results to identify inconsistencies in your environment
• Review your exception requests and false positive submissions

Built for the compliance needs of executives, along with the technical requirements of network administrators, our service allows you to frequently, easily and inexpensively test your Internet accessible systems and networks for security vulnerabilities.

SCANNING FOR PCI DSS COMPLIANCE

Our vulnerability scanning service is thorough and detailed. What's more, Guard Street's provider is certified as an Approved Scanning Vendor (ASV) for the Payment Card Industry Data Security Standard (PCI DSS), endorsed by American Express, Discover, JCB, MasterCard and Visa. If you're a merchant or service provider who stores, processes or transmits cardholder data, you can use our service to assess and validate your PCI DSS compliance by scanning on at least a quarterly basis.
