

CYBERSECURITY

EMAIL SECURITY SERVICES

## Secure your enterprise with human layer email security

Guard Street's powerful trio of email security protects humans from spear-phishing, identity attacks, intelligence gathering and outbound email mistakes. Our service supplements existing email gateways, works on all devices and is easy to install.

We can integrate with your existing email client both on-premise (Exchange and Office) and on-cloud (Exchange Online, GSuite and Office 365).

### CODEBREAKER

#### Empower Your Employees To Identify Phishing Attacks Before It's Too Late.

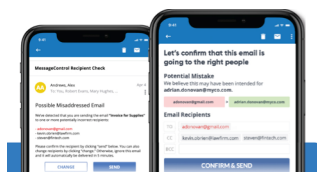

CodeBreaker is a smart version of external warning messages in emails, leveraging artificial intelligence to analyze and highlight inbound email risk. CodeBreaker's warnings help your employees easily spot and thwart email attacks that get past your gateway.

### SILENCER

#### Prevent Email Trackers From leaking Your Data

Silencer stops email metadata leakage from hidden trackers (found in over 60% of all delivered emails). This data leaks out of existing email gateways and is used to target your employees, steal your data, and give others an upper hand in negotiations and litigation.

### GATEKEEPER

#### Defend Against Data Loss From Misaddressed Emails.

GateKeeper analyzes email behavior to accurately detect misaddressed emails, giving your employees a critical second chance when handing off sensitive data.

## ABOUT GUARD STREET PARTNERS

Guard Street is dedicated to assisting our clients with information security risk management, quantifying the cybersecurity need, protecting your digital brand, fraud management and vulnerability detection and prevention.

Our services limit unwanted exposure and protect against external threats by detecting data loss and reducing your attack surface. Should your organization experience a cyber-attack, our team stands ready to help.

### Our experts specialize in:

- Email Security
- Security Awareness Training
- Phishing Simulations
- Vulnerability Assessments
- Remote Workforce Protection
- Incident Response Hotline
- Penetration Tests
- Cyber Policy Creation
- Risk Quantification
- Firmware Assessments
- Brand Monitoring
- Dark Web Monitoring
- Compliance Audits
- Computer Forensic Investigations
- Physical Security

**As a leader in Human Layer Security, Guard Street proudly secures some of the largest companies across several industries including:**

- Law Firms
- Financial Institutions
- Local Governments
- Public Utilities
- Healthcare Providers
- Manufacturing Firms
- Construction Companies
- Accounting Firms
- Logistics Companies
- Non-Profit Organizations

95% of successful attacks originate from emails.

15% of employees still fail simulated phishing tests after rigorous training.

3.4 Billion phishing attacks are sent each day.

60% of delivered emails contain hidden trackers.

*"We know humans are our biggest cyber vulnerability, we've been training them for years to spot phishing but we've never been able to actually help them in real-time. This is the first time our employees have actually thanked us for installing a new security product."*

-CISO at a nationally ranked hospital

*"We had no idea how often other law firms were gathering intelligence on our attorneys until we installed Silencer. We've cut off this massive data leak and, frankly, I sleep better at night knowing nobody can see who we send emails to, or where our employees live, work, or travel."*

-Senior Messaging Manager at Top 30 US Law Firm

*"With CodeBreaker, we've changed our employee culture around email security from fear to empowerment. Now our employees know what to look for."*

-Chief Information Officer of a Local Government
